

Radio communication system operable in cooperation with a VOX system

Patent Number: US4776034

Publication date: 1988-10-04

Inventor(s): MATSUO YOSHITAKE (JP)

Applicant(s): NIPPON ELECTRIC CO (JP)

Requested Patent: JP60116239

Application Number: US19870053530 19870522

Priority Number(s): JP19830223982 19831128

IPC Classification:

EC Classification: H04B1/46

Equivalents: AU3597384, AU591452, CA1238688, EP0143458, JP1628478C, JP2052464B

Abstract

In a radio communication system, a mobile station (11) includes a detecting circuit (16) for producing a detection signal during presence of an audio signal, a producing circuit (31) for delivering a predetermined coded data signal to an audio signal circuit (14) and for supplying a duration signal to a power unit (17) at the end of the detection signal. The power unit disables the transmitting circuit during absence of the detection signal and the duration signal. The transmitting circuit transmits a transmission radio signal modulated by the audio signal and the predetermined coded data signal. A fixed station (12) comprises a separating circuit (44) for separating a reproduction of the predetermined coded data signal from a reproduction of the audio signal. A discriminating circuit (45) discriminates the reproduction of the predetermined coded data signal. Consequently, the fixed station is able to discriminate between presence and absence of the audio signal.
